

Why support Masconomet Education Foundation?
Because MEF supports our students!

MEF funded the High School STEAM Lab which opened in 2016. Next up: the Middle School STEAM Lab! Work has begun and the lab will open this fall.

MEF also funded several educational initiatives not covered by the school budget:

- Google Expedition Virtual Reality equipment which allows students to visit foreign lands, fly to outer space, turn the classroom into a virtual museum, all without leaving the classroom.
- New CPR mannikins for the Intro to Medicine, and Emergency Medical Responder and Technician classes. These new adult and child mannikins comply with AHA standards and provide electronic feedback on compressions, so that students can train more accurately.
- For health science classes, MEF funded a Stop the Bleed kit to teach both students and teachers life-saving skills.
- A Maker Space in the Masco high school library, offering community building activities and creative competitions for all students.
- Sound system improvements to the auditorium for the music and drama classes.

Help us continue to fund these important innovations for our students!
